

INFRARED HEATING GUIDE

Features

- Instant Heat On Demand
- Designed To Save
- Heats Up In 25 Seconds
- Effective Heat Transfer
- Heats Objects Without Heating The Air
- Emission Free Green Technology
- Does Not Reduce Humidity In The Air
- Healthy And Safe To Use
- Does Not Produce Any Odor
- Low Cost Operation
- Wind Proof Heat Transfer

Infrared heating is the most natural form of heat you can experience. It is how we experience heat from the sun, even though it is 92 million miles away across the cold depths of space. But, unlike the Sun it does not contain any damaging ultraviolet Rays.

Infrared waves produce heat by vibrating molecules of the surface they strike. This vibration creates heat and a sensation of warmth which is entirely independent of the temperature of the surrounding air.
