

# DUROMAX 713cc XP23HPE

## Starting Instructions

1. Make sure to check the engine oil level before each use. See engine manual for type and amount.
2. Do not run the pump dry. Be sure to attach and turn on the water to your pump prior to starting.
3. Be sure your fuel tanks quick connect fittings are completely seated and secure.
4. Push the throttle lever up all the way (full Throttle) towards the pump. See image 1.
5. Pull the choke lever out and Hold. The choke lever may retract during starting if not held out. See image 2.
6. Turn the key to start engine. If engine is cold, new, or has been run out of fuel, it may take a few 5-7 second cranking cycles to get the fuel to the top of the engine and start up. See image 3.
7. Once engine has started push choke lever back in.
8. Allow engine to run full throttle for 15-20 seconds, then you can set to desired throttle position.
